

NAVNEET PRACTICE PAPERS COMMERCE

STANDARD XII

Each Subject in this book contains :

- New Format of the Question Paper
- 1 Paper with Solutions and Marking Scheme
- 5 Papers for Practice

Full Solution of Practice Papers through **QR Code**

Economics

Updated as per Portion Omitted from the Syllabus for the Year 2020-2021

- **Organisation of Commerce & Management**
 - Secretarial Practice

Book-keeping & Accountancy

Mathematics & Statistics

English

2021NAVNEET PRACTICE PERS COMMERCE Updated

Based on the Board's New Textbooks and Paper Pattern

STANDARD XII

★ Economics ★ Organisation of Commerce & Management * Secretarial Practice * Book-Keeping & Accountancy Mathematics & Statistics + * English

Salient features :

- An examination-oriented book based on Board's new textbooks.
- All Question Papers/Activity Sheets prepared as per the Board's New Paper Pattern.
- One Model Activity Sheet for English and One Model Question Paper each for all other subjects with full solution and detailed marking scheme for a clear idea of writing the answers exactly as per the requirements of the Board.
- 5 Model Question Papers in each subject for practice.
- Neat, labelled and authentic diagrams, Journal and various Ledger Accounts in the solved papers.
- Helps the student to get full exposure to the new question paper pattern and secure highest marks in the forthcoming Board examination.

Scan this OR code for correct answers and compare your selfassessment.

NON-EVALUATIVE PORTION FOR THE ACADEMIC YEAR 2020-21

Sr. No.	Name of the Chapter / Subtopic	Page No.	Column	Content kept for self study	Details/ Suggestions/ Instructions regarding content kept for self study
1.	Ch. 1 : Introduction to Microeconomics and Macroeconomics	1 & 2	2	You should know who have contributed to the development of macroeconomics.	Should be c o n s i d e r e d for internal evaluation
		3	2 1	Importance of Microeco- nomics It also studies how taxes affect social welfare	"
		5 6	2 1 & 2	Importance of macroeco- nomics, You should know Microeconomics and Macroeconomics at a glance.	"
2.	Ch. 2 : Utility Analysis	11		You should know Total Utility at previous level.	"
		14	1 & 2	Significance of the Law Hence he would buy additional units of a commodity only at a lower price.	>>
3.	3. Ch. 3 (A) : Demand Analysis		1 & 2	Reasons justifying down- ward sloping demand curve are as follows : Thus, the total demand of commodity increases with fall in price.	"
		25	1 & 2	You should know from the sale of the output produced at a given level of employment during a year.	,,
4.	Ch. 3 (B) : Elasticity of Demand	27	2	You should know Necessary goods for which demand remains constant with increase in income of the consumer.	>>

		28	1	You should know	Should be
				Zero cross elas- ticity : Non-related goods. For example, tea and books	for internal
		33 & 34	1 & 2 1 & 2	Factors affecting the elasticity of demand, Importance of elasticity of demand If the proportion of expenditure is large, then demand for the product is relatively elastic.	,,
5.	Ch. 4 : Supply Analysis	39	1 & 2	Determinants of supply If all factors are favourable, supply of a commodity will be more and vice versa.	,,
		43	1	You should know It refers to the minimum amount of sales proceeds which entrepreneurs expect to receive from the sale of output at a given level of employment.	
6.	Ch. 5 : Forms of Market	49	1 & 2	Types of monopoly, You should know electricity charges are different for domestic and commercial uses.	"
7.	Ch. 6 : Index Numbers	53 & 54	2 1	You should know Quantity of the commodity consumed or purchased in the current year.	,,
		58 & 59	2 1	Limitations of index numbers it cannot be used for any other purpose	,,
8.	Ch. 7 : National Income	63	2	You should know (Net fall in stock of natural capital + pollution load) with adjacent picture.	>>
		67	1	You should know to produce various goods and services.	22

		68 & 69	2 1 & 2	Importance of National Income disparities in the income of different sections of the society.	Should be c o n s i d e r e d for internal evaluation
9.	Ch. 8 : Public Finance in India	72	1 & 2	Classification of Public Expenditure For example, administrative costs, war expenditure, etc. These are unproductive in nature.	"
		74	1 & 2	You should know such a tax cannot be considered as a good tax.	"
		78 & 79	1 1 & 2	Typesofbudget,Importanceofbudgetimmensechangessincelastyears.100	"
10.	Ch. 9 : Money Market and Capital Market in India	87 & 88	2	Problems of Indian Money Market Delays in upgradation of technology hampers the working of the money market.	"
		90 & 91	1 & 2	Problems of Capital Market The stock exchange in India lacks informational efficiency compared to advanced countries.	>>
11.	Ch. 10 : Foreign Trade of India	96 & 97	1 & 2	Trends in India's Foreign Trade since 2001 The share of iron and steel in import expenditure declined from 4.9 % to 2.1 % in 2016-17.	"

MODEL PRACTICE PAPER

(WITH FULL SOLUTION AND MARKING SCHEME)

ECONOMICS

Time : 3 Hours]

[Max. Marks : 80

(5) [20]

Note: (1) All questions are compulsory.

- (2) Draw neat tables/diagrams wherever necessary.
- (3) Figures to the right indicate full marks.
- (4) Write answers to all main questions on a new page.

Q. 1. (A) Complete the following statements by choosing the correct

alternatives :

(1) In the law of diminishing marginal utility, Alfred Marshall assumes

that marginal utility of money

- (a) increases (b) remains constant
- (c) decreases (d) rises and then falls
- (2) Demand curve is parallel to X-axis in case of
 - (a) perfectly elastic demand (b) perfectly inelastic demand
 - (c) relatively elastic demand (d) relatively inelastic demand
- (3) Index number is a tool.
 - (a) historical (b) geographical
 - (c) statistical (d) linguistic
- (4) is the quantitative tool of credit control.
 - (a) Moral Suasion (b) Credit Rationing
 - (c) Fixing Margin Requirement (d) Statutory Liquidity Ratio
- (5) Duty levied on is special levy.
 - (a) television (b) telephone
 - (c) opium (d) notebook

ECONOMICS

(B) Find the odd word out :

- (1) Harmful Products : Alcohol, Poison, Opium, Milk.
- (2) Necessary Goods : Salt, Medicine, Milk, Perfume.
- (3) Type of Bank Accounts : Saving a/c, D-mat a/c, Recurring a/c, Current a/c.
- (4) Exceptions to the Law of Supply : Urgency of cash, Agricultural produce, Labour, Mobile phone.
- (5) Feature of Monopoly : Single seller, Large number of buyers, Selling cost, Price discrimination.

(C) Complete the correlation :

- (1) Transportation of good : Place utility : : Furniture from wood :
- (2) Microeconomics : Individual income : : Macroeconomics :
- (3) : Central bank : : SBI : Commercial bank
- (4) Rise in price : Expansion of supply : : Fall in production cost :
- (5) Pen and ink : Complementary goods : : Car and milk :

(D) Give an economic term :

110

- (1) Reward of entrepreneur.
- (2) Number of firms producing identical product.
- (3) Compulsory contribution from the person to the government without reference to special benefits confirmed.
- (4) The additional utility derived from the consumption of an additional (last) unit of a commodity.
- (5) A situation where less quantity is demanded at higher price.
- Q. 2. (A) Identify and explain the concepts from the given illustrations :

(Any THREE) (6) [12]

- Due to rise in prices of mango, Sheetal demanded only three dozen mangoes instead of five dozen.
- (2) Razak, instead of demanding more, reduced the demand of vegetable ghee as his salary increased.

(5)

(5)

- (3) ABC firm sold 10 chairs charging ₹ 1000 each and received ₹ 10000.
- (4) Maharashtra purchased wheat from Punjab.
- (5) Tina deposited a lump sum amount of ₹ 50,000 in the bank for a period of one year.
- (B) Distinguish between : (Any THREE)
 - (1) Utility and Usefulness
 - (2) Expansion of Supply and Contraction of Supply
 - (3) Direct Tax and Indirect Tax
 - (4) Simple Index Numbers and Weighted Index Numbers
 - (5) Money Market and Capital Market

Q. 3. Answer the following questions in brief : (Any THREE)

- Explain the concept of market and the types of market on the basis of place.
- (2) Explain the concept of Theory of Welfare. Explain the scope of microeconomics with reference to the theory of welfare.
- (3) Explain the concept of Price Index Number. Explain the steps in constructing price index number.
- (4) Explain any four problems of capital market in India.
- (5) Explain the concept of Balance of Trade.
- Q. 4. State with reasons whether you agree or disagree with the following statements : (Any THREE) [12]
 - (1) A seller is a price taker in monopoly.
 - (2) Transfer payments are excluded from the measurement of national income.
 - (3) Index numbers cannot be constructed without a base year.
 - (4) Microeconomics is known as Income Theory.
 - (5) Gross National Product and Gross Domestic Product are same concepts.

Q. 5. Study the following table, diagram, passage and answer the questions given below : (Any TWO)

[8]

(6)

[12]

(1) Study the following table and answer the questions :

Price (₹)	A's SS + B's SS + C's SS +	Market Supply (Units per day)
1	10 + 20 + 30 =	60
2	20 + 30 + 40 =	90
3	30 + 40 + 50 =	120
4	40 + 50 + 60 =	150
5	50 + 60 + 70 =	180

Questions :

- (i) Explain the concept of Market Supply Schedule. (2)
- (ii) Draw a market supply curve.

Ύ Point of Satiety 20 TU curve 18. 16 14 TU 12 & 10 MU 8. 6. 4 2. 0 x 2 3 4 -2 MU curve Units of Commodity

(2) Study the following diagram and answer the questions :

Questions :

(i) Explain the nature of Total Utility Curve.

(2)

(2)

(ii) Explain the concept of Point of Satiety with reference to the diagram. (2)

(3) Study the following passage and answer the questions :

The Green Gross National Product (Green GNP or GGNP) is an index of economic growth with the environmental consequences of that growth factored into a country's conventional GDP. Green GDP monetizes the loss of biodiversity, and accounts for costs caused by climate change. Some environmental experts prefer physical indicators such as "waste per capita" or "carbon dioxide emissions per year", which may be aggregated to indices such as the "Sustainable Development Index".

Calculating green GDP requires that net natural capital consumption, including resource depletion, environmental degradation, and protective and restorative environmental initiatives, be subtracted from traditional GDP. Green GNP can be said as the measurement of the National Income or Output adjusted for the depletion of natural resources/ degradation of environment. Let's take an example, for instance the National Income (NNP) for a current year is 10,000 units and the degradation of environment in the same year is quantified at 1000 units. The Green GNP will thus result to be 9000 units!

The role of Green Economy, aims at Sustainable Consumption and Production and Resource Efficiency for Sustainable Development : Sustainable Consumption and Production aims to improve production processes and consumption practices to reduce resource consumption waste generation and emissions across the full life cycle of processes and products – while Resource Efficiency refers to the ways in which resources are used to deliver value to society and aims to reduce the amount of resources needed, and emissions and waste generated, per unit of product or service. The Green Economy provides a macro-economic approach to sustainable economic growth with a central focus on investments, employment and skills.

Questions :

- (i) Explain the concept of GGNP. (2)
- (ii) Comment on the calculation of GGNP.
- Q. 6. Answer the following questions in detail : (Any TWO)
 - What is non tax revenue of government? Explain non tax sources of revenue of government.
 - (2) What is the meaning of Demand? Explain the determinants of demand.
 - (3) What is Elasticity of Demand? Explain the importance of elasticity of demand.

(2)

[16]

SOLUTION : MODEL PRACTICE PAPER – ECONOMICS

प्र. क्र. Q. No. 1 (A	<u></u>	
1 (//		Note: Five statements with four options each will be given in the question paper.
		Students are expected to write the proper alternative in the answer sheet.
	(1)	remains constant
	(2)	perfectly elastic demand
	(2)	
	(3)	statistical
	(4)	Statutory Liquidity Ratio
	(+)	
	(5)	opium
		R
		(Each correct answer carries 1 mark; Total 5 marks.)
		NAUNEET
1 (B)		Note : Five questions with four words each will be given in the question paper. Students
	F	are expected to find out the odd word from each and write the same in the answer sheet.
	(1)	Odd word - Milk
	(2)	Odd word - Perfume
	(3)	Odd word - D-mat a/c
	(4) (5)	Odd word : Mobile phone Odd word : Selling cost
		(Each correct answer carries 1 mark; Total 5 marks.)
		-

Я. 新. Q. No. 1 (С)		
— Q. No. 1 (C)		Note: Five questions with three words and one blank in each will be given in the
		question paper. Students are expected to find the correlation between the three words
		and fill in the blank. Then write the same in the question paper.
	(1)	Form utility
	(2)	National Income
	(3)	The Reserve Bank of India
	(4)	Increase in supply
	(5)	Unrelated goods
		(Each correct answer carries 1 mark; Total 5 marks.)
1 (D)		
		Note : Five statements will be given in the question paper. Students are expected to write statements in answer sheet and write the answer against them.
	(1)	Reward of entrepreneur - Profit.
	(2)	Number of firms producing identical product - Industry.
	(3)	Compulsory contribution from the person to the government without
		reference to special benefits confirmed - Tax.
	(4)	The additional utility derived from the consumption of an additional
		(last) unit of a commodity - Marginal Utility
	(5)	A situation where less quantity is demanded at higher price -
		Contraction of Demand.
		(Each correct answer carries 1 mark; Total 5 marks.)

प्र. क्र. Q. No.	2 (A)		Note : Five concepts will be given in the question paper. Students are expected to write answer to any three questions. However, answers for all five questions are given here. Write to the point answers.
		(1)	(A) Identified concept : Contraction in demand.
			(B) Explanation of concept : Other factors remaining constant, a fall
			in demand due to a rise in price is called contraction in demand.
		(2)	(A) Identified concept : Negative income elasticity of demand.
			(B) Explanation of concept : When demand for certain goods decreases
			due to a rise in the income of the consumer, such goods are said
			to have negative income elasticity of demand. (Inverse relation
			between the demand and income) Inferior/Giffen goods have
			negative income elasticity of demand.
			Inferior/Giffen Goods' Demand ↓ Income ↑
		(3)	(A) Identified concept : Total revenue.
			(B) Explanation of concept : Total revenue is the total sales proceeds
			of a firm by selling a commodity at a given price. It is the total
			income of a firm. Total Revenue = Price × Quantity. In the given
			illustration, ABC firm's Total Revenue = 1000 × 10 = ₹ 10,000.
		(4)	(A) Identified concept : Internal/Home trade (Inflow of goods)
			(B) Explanation of concept : Internal trade is the purchase (inflow)
			and sale (outflow) of goods and services within the geographical
			boundaries of a nation.
		(5)	(A) Identified concept : Fixed deposit.
			(B) Explanation of concept : A fixed deposit is a type of deposit in
			which a person deposits a certain amount in the form of a deposit
			in a commercial bank for a fixed period of time. He can withdraw
			the amount from the deposit after a specified period.
			[Each correct answer carries 2 marks (1 mark each for identifying
			the concept; 1 mark each for explaining the concept); Total 6 marks.]

3		Note : Five questions will be given in the question paper. Students are expected to write
		answers to any three questions. However, answers of all five questions are given here.
		At least four points must be written in the answer.
 	(1)	(A) Meaning: Market is a network of dealings between potential
 	++	B. Types of markets on the basis of place : The types of markets on
 	++	(B) Types of markets on the basis of place : The types of markets on the basis of the place are as follows :
 	+	the basis of the place are as follows:
 	+	(i) Local market : Local market is a market in which sellers sell and
 		consumers buy a product in the region or area in which it is
 		produced.
 		(ii) National market : National market is a domestic market in a given
 		country. It is a market in which buyers and seller trade goods and
 		services within the national borders. Each national market is
 		governed by the regulation of its own country.
 		(iii) International market : International market is a worldwide
 		(global) market in which buyers and sellers trade in goods and
 		services across the national borders. International market is
 		governed by the international regulations.
 	(2)	(A) Meaning: Theory of Welfare lies within the scope of
 	+	microeconomics. Theory of Welfare basically deals with efficiency
 		in the allocation of resources. Efficiency in allocation of resources
 		is attained when it results in the maximum satisfaction of people
 		in an economy.
 		(B) Scope of microeconomics with reference to the Theory of
 		Welfare : Microeconomics studies the following three efficiencies
 	'	in its scope :
 	'	(i) Efficiency in production : Efficiency in production means to
 	'	produce maximum possible amount of goods from the given amount
 	<u> </u>	of resources. Microeconomics analyses how efficiency in production
 	<u> </u>	can be obtained.

प्र. क्र. Q. No. 3		
S. 1.0. J		(ii) Efficiency in consumption : Efficiency in consumption means
		distribution of produced goods and services among the people for
		consumption in such a way as to maximise total satisfaction of
		society. Microeconomics analyses how efficiency in consumption
		can be obtained.
		(iii) Overall economic efficiency : Overall economic efficiency means
		producing those goods which are most desired by people in
		society. Microeconomics analyses how overall economic efficiency
		can be obtained.
	(3)	(A) Meaning :
		(1) Price index number is a type of index number derived by multiplying
		the ratio of sum of the prices of various commodities of the
		current year and sum of the prices of various commodities of the
		base year by 100.
		(2) The formula for measuring price index number is as follows :
		NAVIJELI
		Price Index Number $P_{01} = \frac{\sum P_1}{\sum P_0} \times 100$
		$\sum P_0$
		(B) Steps in constructing price index number :
		(1) \sum P ₁ = Adding the prices of various commodities of the current
		year.
		(2) $\sum P_0$ = Adding the prices of various commodities of the base year.
		(3) $\frac{\sum P_1}{\sum P_1}$ × 100 = Multiplying the ratio of sum of the prices of various
		$\sum P_0$
		commodities of the current year and sum of the prices of various
		commodities of the base year by 100.
		ECONOMICS 121

		_	
न्न. क्र. Q. No.	3		
	5	(4)	The following are the problems of capital market in India :
			(i) Financial Scams, Insider trading and Price manipulation : Financial
			scams are on the rise in the Indian capital market. Rising financial
			scandals have increased the distrust of the general public and as
			a result, investors' confidence in investing in the capital market
			has waned. As a result, capital markets face irreparable losses in
			the form of declining public confidence.
			Some individuals have access to confidential information of
			companies. Such individuals, for personal gains, buy and sell
			securities on the basis of the unpublished confidential information
			of companies. Some individuals deliberately raise or lower the
			price of shares by buying and selling shares of certain companies
			for personal gain. Such illegal transactions are adversely affect
			the smooth functioning of the capital market of India.
			(ii) Inadequate debt instruments : In the capital market of India,
			debt instruments include bonds, debentures, etc. Due to narrow
			investor base, high cost of issuance, restrictions on entry of small
			and medium enterprises into the capital market, etc., there is
			relatively few trading in debt securities.
			(iii) Decline in the volume of trade : Capital market investors can
			trade online. As a result, capital market investors in various parts
			of the country prefer to invest in securities listed in premier
			stock exchanges like in the Bombay Stock Exchange and in the
			National Stock Exchange. As a result, there has been a sharp
			decline in trade in regional stock exchanges in India.
			(iv) Lack of information efficiency : If the company's current stock
			price incorporates all the information about the company, then a
			market is said to be informationally efficient. However, the
			efficiency of information in the Indian stock market is relatively
			low compared to other developed countries. As a result, investors
			do not get the expected return on investment and thus lose faith
			in the capital market.

	प्र. क्र. Q. No.	3			
	~	5	(5)	The concept of balance of trade can be explained with the help of	
				the following points :	
				(i) Balance of trade is the difference between the value of a country's	
				exports and imports for a given period. Balance of trade is also	
				referred to as the international trade balance.	
				(ii) According to Bentham, "Balance of trade of a country is the	
				relation over a period between the values of her exports and	
				imports of physical goods."	
				(iii) According to Samuelson, "if export value is greater than the	
				import value it is called as trade surplus and if import value is	
				greater than export value, then it is called as trade deficit."	
				(iv) It is clear from the above definitions that balance of trade	
				includes the value of imports and exports of visible goods and	
				invisible goods.	
				(Write at least four points in the answer. Each correct answer carries	
				4 marks; Total 12 marks.)	
				ECONOMICS 123

प्र. क्र. Q. No.	4		
	•		Note : Five statements will be given in the question paper. Students are expected to
			write answers to any three questions. However, answers for all five questions are given
			here. Write three points of explanation/reasons after stating 'agree' or 'disagree'.
		(1)	No, I disagree with this statement.
			Reasons :
			(i) In a monopoly market, there is a single seller or a single producer.
			Under monopoly, monopolist has no rivals and he faces no
			competition.
			(ii) Under monopoly, entry of other firm is strictly restricted. Under
			monopoly, many entry barriers such as natural, economic,
			technological or legal do not allow competitors to enter the
			market.
			(iii) In monopoly, the monopolist's individual supply itself becomes the
			market supply and the firm itself becomes the industry. Therefore
			in monopoly, monopolist can set any price for his product. Similarly,
			he can also follow the technique of price discrimination for
			maximising the profit.
			Thus, a seller is not a price taker but a price maker in monopoly.
		(2)	Yes, I agree with this statement.
			Reasons :
			(i) Some people from an economy receives pension,
			unemployment allowances, etc.
			(ii) Though pension, unemployment allowances, etc. is considered
			as an individual's income, it is not an earned income.
			(iii) Individual receives this income from government's
			expenditure. Therefore it becomes difficult to decide
			whether or not to include such income in national income.
			Therefore, transfer payments are excluded from the measurement
			of national income.

 प्र. क्र. Q. No.	4		
	•	(3)	Yes, I agree with this statement.
			Reasons :
			(i) Index numbers measures the changes in an economic variable in
			present times with reference to the year in the past. This year in
			the past is known as base year.
			(ii) For the calculation of index numbers, the normal year from the
			past is selected as the base year. The base year should be normal,
			i.e. it should be free from natural calamities, warlike conditions,
			emergencies, etc. Similarly, it should not be too distant in the
			past.
			(iii) While preparing index numbers with reference to the base year,
			it is denoted by the suffix 'o'. The base year's index of a selected
			variable is assumed as 100. The index numbers are measured for
			the current year on the basis of the past year.
			Thus, index numbers cannot be constructed without the base
			year.
		(4)	No, I disagree with this statement.
			Reasons :
			(i) Income Theory lies within the scope of macroeconomics.
			(ii) Microeconomics explains how the prices of a variety of goods and
			services are determined. Thus, theories of demand, supply,
			production function and cost fall within the scope of microeconomics.
			(iii) Microeconomics also explains how the prices of factors of
			production, viz., land, labour, capital and entrepreneur are
			determined. Thus, theories of rent, wages, interest and profit
			fall within the scope of microeconomics.
			Therefore, microeconomics, is not known as Income Theory but is
			known as Price Theory.

प्र. क्र. Q. No. д		
Q. No. 4	(5)	No, I disagree with this statement.
		Reasons :
		(i) Gross National Product is the total measure of the flow of
		goods and services at market value resulting from current
		production during a year in a country, including net income
		from abroad.
		(ii) Gross Domestic Product is the gross market value of all final
		goods and services produced within the domestic territory
		of a country during a period of one year. Net income from
		abroad is excluded from Gross Domestic Product.
		(iii) The formula of Gross National Product is as follows :
		GNP = C + I + G + (X-M) + (R-P).
		Whereas, the formula of Gross Domestic Product is as
		follows: GDP = C + I + G + (X-M).
		Therefore, Gross National Product and Gross Domestic Product
		are not same concepts, but are different concepts.
		(Each correct answer carries 4 marks; 1 mark each for stating
		'Agree' or 'Disagree'; 3 marks each for writing correct reasons;
		Total 12 marks.)

प्र. क्र. Q. No.	5	Note : One table, diagram and passage and questions based on them will be given in
		the question paper. Students are expected to write answers to any two questions.
		However, answers for all three questions are given here.
	(1)	(i) (a) The sum of the total quantities of a commodity supplied
		by all sellers at different prices during a given period of
		time is market supply.
		(b) Market supply schedule is a tabular representation of
		the sum of the total quantities of a commodity supplied
		by all sellers at different prices during a given period of
		time.
		(c) Market supply schedule indicates the direct relationship
		between the price and the quantity supplied.
		(ii) Market Supply Curve :
		Y t
		5
		4
		δ. 2b
		1a
		 ✓ 0 ✓ 60 90 120 150 180 X
		0 60 90 120 150 180 X Market Supply
	(2)	(i) (a) Initially, the total utility curve slopes upward from the
		left to the right, then it becomes parallel to the X axis
		and at last, it slopes downword from the right to the
		left.
		(b) Total utility curve may have positive, zero and negative
		slope.
		(ii) (a) The various units of a commodity consumed in quick
		succession leads to decrease in intensity of want and
		increase in the satisfaction.
		1
		ECONOMICS 127

प्र. क्र. Q. No.	5		(b) At a particular point, (at 5th unit in the given diagram)
			consumer's want gets fully satisfied. This point is called
			as a point of satiety. A rational consumer refuses to
			consume the next unit of consumption after the point
			of satiety.
		(3)	(i) <u>Concept of GGNP</u> : The concept of GGNP can be explained with the
			help of the following points :
			(a) Meaning : The Green Gross National Product (Green GNP or
			GGNP) is an index of economic growth with the environmental
			consequences of that growth factored into a country's
			conventional GDP. Green GDP monetises the loss of biodiversity,
			and accounts for costs caused by climate change.
			(b) Indicators of GGNP : "Waste per capita" or "Carbon dioxide
			emissions per year" are some of the indicators of GGNP. The
			value of these indicators may be aggregated to calculate
			indices such as the "Sustainable Development Index".
			(ii) Calculation of GGNP : The calculation of GGNP can be explained
			with the help of the following points :
			(a) GGNP is calculated by subtracting the value of net natural
			capital consumption including resource depletion, environmental
			degradation and protective and restorative environmental
			initiatives from the value of GDP. Thus, GGNP can be said as
			the measurement of the National Income or Output adjusted
			for the depletion of natural resources/ degradation of
			environment.
			(b) For example, for instance the National Income (NNP) for a
			current year is 10,000 units and the degradation of
			environment in the same year is quantified at 1000 units. The
			Green GNP will thus result to be 9000 units.
			(Each correct answer carries 4 marks; Total 8 marks.)

प्र. क्र. Q. No. 6		Note : Three questions will be given in the question paper. Students are expected to	
Q. No. 6		write answers to any two questions. However, answers for all three questions are given	
	ŢŢ	here. At least four big or eight small points must be written in detail.	
	(1)	(A) Meaning of non tax revenue of government : Revenue received by	
		government through the sources other than direct taxes and	
		indirect taxes is known as non tax revenue of government.	
		(B) Non-tax sources of revenue of the government : Non tax sources	
		of revenue of the government are as follows :	
		(i) Fees : Fee is paid by citizens in return for certain specific services	
		rendered by the government. For example, education fee,	
		registration fee, etc.	
		(ii) Prices of public goods and services : Modern governments sell	
		various types of commodities and services to the citizens. A price	
		is a payment made by the citizens to the government for the	
		goods and services sold to them. For example, railway fares, postal	
		charges, etc.	
		(iii) Special Assessment : The payment made by the citizens of a	
		particular locality in exchange for certain special facilities given	
		to them by the authorities is known as 'special assessment.' For	
		example, local bodies can levy a special tax on the residents of a	
		particular area where extra/special facilities of roads, energy,	
		water supply, etc. are provided.	
		(iv) Fines and Penalties : The government imposes fines and penalties	
		on those who violate the laws of the country. The objective of	
		the imposition of fines and penalties is not to earn income, but	
		to discourage the citizens from violating the laws framed by the	
		government. For example, fines for violating traffic rules.	
		However, the revenue from this source is comparatively limited.	
		ECONOMICS 129	

प्र. क्र.]	
Q. No.	6		(v) Gifts, grants and donations : The government may also earn some
			income in the form of gifts by the citizens and others. The
			government may also receive grants from the foreign governments
			and institutions for general and specific purposes. Foreign aid has
			become an important source of development finance for a
			developing country like India. However, this source of revenue is
			uncertain in nature.
			(vi) Special levies : The government levies duties on those commodities,
			the consumption of which is harmful to the health and well-being
			of the citizens. Like fines and penalties, the objective of special
			levies is not to earn income, but to discourage citizens from the
			consumption of harmful commodities. For example, duties levied
			on wine, opium and other intoxicants.
			(vii) Borrowings : The government borrows from the citizens in the
			form of deposits, bonds, etc. Government also gets loans from
			foreign governments and international organizations such as IMF,
			World Bank, etc. In modern times, loans are becoming more and
			more popular source of revenue for the governments.
		(2)	(A) Meaning : Demand refers to a desire backed by the ability to pay
			and the willingness to pay for a particular commodity. Demand has
			relation with price, place and time.
			(B) Determinants of demand : The determinants of demand are as
			follows :
			(i) Price : Price is one of the most important factors that affect
			market demand. Usually, larger quantity is demanded at a lower
			price and vice versa.
			(ii) Income : Income is yet another important factor that affects
			market demand. Income affects the purchasing power of a
			consumer. Income and demand are directly related to each other.
			Normally, demand rises with increasing income and vice versa.
		1	

प्र. क्र.		
Q. No.	6	(iii) Prices of substitutes goods and prices of complementary
		goods: Market demand also gets influenced by the prices of
		substitutes. If a substitute is available at a lower price, people
		demand the substitute good in greater quantities than the
		commodity in question. For example, if the price of tea falls,
		demand for coffee tends to fall.
		Similarly, Market demand also gets affected by the prices of
		complementary goods. If the price of a complementary good
		rises, the demand of the commodity in question tends to fall. For
		example, if the price of petrol rises, demand for cars tends to
		fall.
		(iv) Nature of products : If a commodity is a necessity and its use is
		unavailable, then its demand will continue to be the same
		irrespective of change in its price. For example, demand for salt,
		medicines, etc. Thus, nature of commodity determines the demand.
		(v) Size of Population : Demand for various goods and services get
		affected by the size as well as the composition of population. An
		increase in population leads to an increase in demand for a variety
		of goods and services. On the other hand, decrease in population
		leads to decrease in demand for a variety of goods and services.
		(vi) Expectations about future prices : Expectations about future
		prices also determines the demand. For example, if consumers
		expect fall in the price of a particular commodity in the near
		future, they will demand less quantities of such commodity though
		its present price is comparatively less and vice versa.
		(vii) Advertisements : Nowadays, the market demand for goods and
		services gets highly influenced by advertisements and other
		promotional activities. Attractive advertisements, sales promotion
		schemes and effective salesmanship lead to increase in demand
		for various goods and services. For example, demand for
		toothpastes, cosmetics, etc.

प्र. क्र. Q. No.	,	7	
Q. NO.	6	(3)	(A) Meaning : Elasticity of demand can be explained with the help of
		_	the following points :
			(i) The elasticity of demand is a technical term which describes the
			responsiveness of change in quantity demanded to fall or rise in
			its price or the responsiveness of change in quantity demanded to
			change in other factors such as change in the income of the
			consumer or change in the prices of other goods.
			(ii) According to Alfred Marshall, "Elasticity of demand is great or
			small according to the amount demanded which rises much or
			little for a given fall in the price and quantity demanded falls
			much or little for a given rise in price."
			(B) Importance of elasticity of demand : The importance of elasticity
			of demand can be explained with the help of the following points :
			(i) Importance to producers : The concept of elasticity of demand
			helps the seller in fixing the prices of his products. If the demand
			for a commodity sold by the producer is inelastic, the producer
			can charge higher price for such a commodity and can earn the
			maximum profit. On the other hand, if the demand for a commodity
			sold by the producer is elastic, the producer can charge lower
			price for such a commodity and can earn the profit by its maximum
			sale.
			(ii) Importance to the Government : The concept of elasticity of
			demand helps the finance minister and the government in framing
			the taxation policy. If the demand for a particular commodity is
			inelastic, the government can collect more revenue by imposing
			heavy taxes on such a commodity. Therefore, generally heavy
			taxes are imposed on commodities like cigarettes, liquor, etc. On
			the other hand, if the demand for a particular commodity is
			elastic, the government can impose low taxes and can encourage
			sale of such a commodity and can collect revenue from it.

प्र. क्र.		
Q. No.	6 –	(iii) Importance in factor pricing: The concept of elasticity of
		demand also helps in the determination of wages of workers. For
		example, the demand for skilled employees performing higher
		intellectual work is less elastic, therefore they can demand more
		salary. On the other hand, the demand for unskilled labourer
		performing physical work is more elastic, therefore they have to
		accept comparatively low wages.
		(iv) Importance in foreign trade : The concept of elasticity of demand
		is helpful to the government in determining the terms and
		conditions for international trade and framing the export and
		import policy. If the demand for a commodity exported is inelastic,
		the country can raise the price of that commodity in the
		international market. On the other hand, if the demand for a
		commodity exported is elastic, the country can focus on its
		maximum export at low price in the international market.
		(v) Public utilities : The concept of elasticity of demand is helpful to
		government in taking decisions regarding manufacturing and selling
		various goods and services by various sectors in a mixed economy.
		In order to avoid the exploitation of the consumers and to promote
		the social welfare, public sector manufactures and sells certain
		goods and services having less elastic demand. For example, public
		utilities like railways have inelastic demand. Therefore to avoid
		the exploitation of consumers, the government can either subsidise
		or nationalise such public utilities. On the other hand, government
		allows private sector to produce and sell those commodities having
		relatively elastic demand.

प्र. क्र. Q. No.	6	
		(vi) Proportion of expenditures : The concept of elasticity of demand
		is also helpful in taking decisions regarding consumption of various
		goods and services. If a proportion of expenditure on a particular
		product in a person's total income is small and recurring, the
		demand for such a product is relatively inelastic. For example,
		expenditure on a newspaper. Consumer can regularly consume
		such a commodity. On the other hand, if a proportion of
		expenditure on a particular product in a person's total income is
		large and occasional, the demand for such a product is relatively
		elastic. With proper economic planning, a consumer can consume
		such a commodity. For example, planned expenditure on luxury
		goods.
		R
